

JAVA SERVER PAGES

START 

Learning Goals

After the course, attendees will be able to:

- ▶ Know about Java Server Pages (JSP)
- ▶ Can use JSP to build Web application

Table of contents

- ▶ **Introduction**
- ▶ **Architecture**
- ▶ **Implicit Objects**
- ▶ **Scripting**
- ▶ **Standard Actions**
- ▶ **Directives**
- ▶ **Session Tracking**
- ▶ **Exception Handling**

Trainee's missions

To complete this course and achieve goals, trainees must:

- ▶ Read Lecture, Reference
- ▶ Do Exercises
- ▶ Take quiz
- ▶ Complete Assignment

JSP Introduction

What is JSP?

- JavaServer Pages (JSP) is a technology for developing web pages that support dynamic content which helps developers insert java code in HTML.
- A JavaServer Pages component is a type of Java servlet

Why Use JSP?

- Performance is significantly better
- JSP are always compiled before it's processed by the server
- JSPs are built on top of the Java Servlets API
- JSP pages can be used in combination with servlets

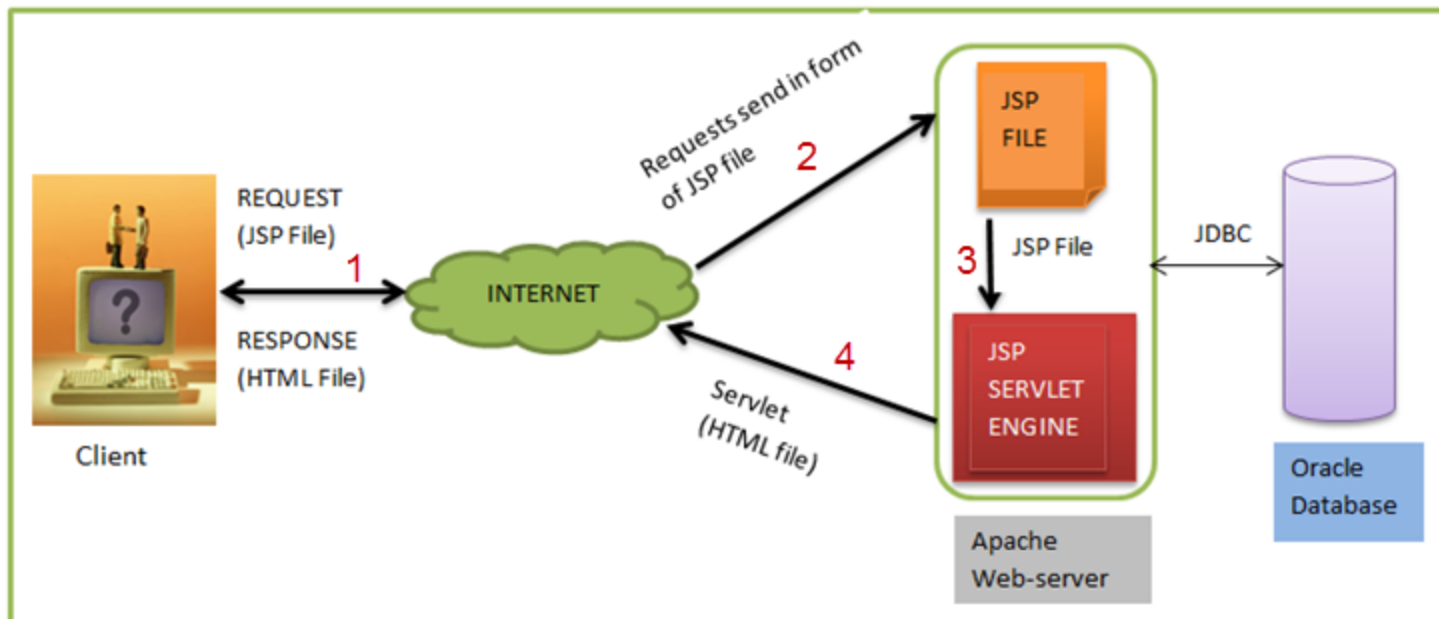

JSP Processing

How the web server creates the web page using JSP:

- Browser sends an HTTP request
- Forwards it to a JSP engine
- The JSP engine loads the JSP page from disk and converts it into a servlet content.
- The JSP engine compiles the servlet into an executable class and forwards the original request to a servlet engine.
- Web server called the servlet engine loads the Servlet class and executes it.
- The servlet produces an output in HTML format
- The web server forwards the HTTP response to your browser with HTML content

First Example

```
<%@page import="java.util.Date"%>  
<%@ include file="index.html"%>  
<%@ page language="java" contentType="text/html; charset=ISO-8859-1"  
    pageEncoding="ISO-8859-1"%>
```

1 Direction tag

```
<!DOCTYPE html PUBLIC "-//W3C//DTD HTML 4.01 Transitional//EN" "http://www.w3.org/TR/html4/loose.dtd">  
<html>  
<head>  
<meta http-equiv="Content-Type" content="text/html; charset=ISO-8859-1">  
<title>The First JSP</title>  
</head>  
<body>
```

```
<%!String stringHello = "Hello, Welcome to the Frist JSP!";%>
```

2 Decleration tag

```
<%=stringHello%>  
To day is: <%=new Date()%>
```

3 Expression tag

```
<jsp:setProperty property="HelloWorld" name="userName" />  
<jsp:forward page="Welcome.jsp"></jsp:forward>
```

4 Action tag

```
</body>  
</html>
```

Implicit Objects

- Are the Java objects that the JSP Container makes available
- Can call them directly without being explicitly declared

Object	Description
request	This is the HttpServletRequest object associated with the request.
response	This is the HttpServletResponse object associated with the response to the client.
out	This is the PrintWriter object used to send output to the client.
session	This is the HttpSession object associated with the request.
application	This is the ServletContext object associated with application context.
config	This is the ServletConfig object associated with the page.
pageContext	This encapsulates use of server-specific features like higher performance JspWriters .
page	This is simply a synonym for this , and is used to call the methods defined by the translated servlet class.
Exception	The Exception object allows the exception data to be accessed by designated JSP.

Create Example

Create Example

Banner, Footer, Menu

```
Menu.jsp
<table style="border: 1px solid #cccccc; width: 100%;">

  <tr>
    <td><h4>SELECT ONE ITEM:</h4>
    </td>
  </tr>

  <tr>
    <td><a href="Register.jsp">Register</a>
    </td>
  </tr>

  <tr>
    <td><a href="ListMember.jsp">List Member</a>
    </td>
  </tr>

  <tr>
    <td><a href="Logout.jsp">Logout</a>
    </td>
  </tr>

  <tr>
    <td height="270">&nbsp;</td>
  </tr>

</table>
```

```
Banner.jsp
<table width="100%">
  <tr>
    <td></td>
  </tr>
</table>
```

```
Footer.jsp
<%@ page language="java" contentType="text/html; charset=ISO-8859-1"
    pageEncoding="ISO-8859-1"%>

<table style="border: 1px solid #cccccc; width: 100%;">
  <tr>
    <td><h1>Fsoft.FWA - JSP DEMO</h1></td>
  </tr>
</table>
```

jsp: include

```
Login.jsp X
<table style="border: 1px solid;">
  <tr>
    <td colspan="2"><jsp:include page="Banner.jsp" /></td>
  </tr>
  <tr valign="top">
    <td align="center" width="100%">
      <div style="border: 1px solid #cccccc; width: 100%; height: 400px;">
        <form action="Welcome.jsp" method="post">
          <table
            style="border: 1px solid #cccccc; width: 20%; margin: 10px;"
            align="center">
            <tr>
              <td>Username:</td><td><input type="text" name="userName" /></td>
            </tr>
            <tr>
              <td>Password:</td><td><input type="password" name="password" /></td>
            </tr>
            <tr>
              <td></td>
              <td><input type="submit" value="Login" /></td>
            </tr>
          </table>
        </form>
      </div>
    </td>
  </tr>
  <tr>
    <td colspan="2"><jsp:include page="Footer.jsp" /></td>
  </tr>
</table>
```

Import, request

```
Welcome.jsp X
<%@page import="java.util.Date"%>
<%@ page language="java" contentType="text/html; charset=ISO-8859-1"
    pageEncoding="ISO-8859-1"%>
<%@page errorPage="ErrorPage.jsp" %>
<!DOCTYPE html PUBLIC "-//W3C//DTD HTML 4.01 Transitional//EN" "http://www.w3.org/TR/html4/loose.dtd">
<html>
<head>
<meta http-equiv="Content-Type" content="text/html; charset=ISO-8859-1">
<title>Welcome JSP</title>
</head>
<body>
    <table style="border: 1px solid;">
        <tr>
            <td colspan="2"><jsp:include page="Banner.jsp" /></td>
        </tr>
        <tr>
            <td>
                <%
                    String userName = request.getParameter("userName");
                %>
            <tr valign="top">
                <td valign="top" width="20%"><jsp:include page="Menu.jsp" /></td>
                <td align="center" width="80%">
                    <div style="border: 1px solid #cccccc; width: 100%; height: 400px;">
                        <table style="width: 60%; margin: 10px;" align="center">
                            <tr>
                                <td><h3>Today: <%=new Date() %></h3></td>
                            </tr>
                            <tr>
                                <td><h3>Welcome to: <%=userName%></h3></td>
                            </tr>
                        </table>
                    </div>
                </td>
            </tr>
        </td>
    </table>
</body>
</html>
```

Register

```
Register.jsp X
</td>
<tr valign="top">
  <td valign="top" width="20%"><jsp:include page="Menu.jsp" /></td>
  <td align="center" width="80%">
    <div style="border: 1px solid #cccccc; width: 100%; height: 400px;">
      <form action="ListMember.jsp" method="post">
        <table
          style="border: 1px solid #cccccc; width: 20%; margin: 10px;"
          align="center">
          <tr>
            <td>FullName:</td>
            <td><input type="text" name="fullName" /></td>
          </tr>
          <tr>
            <td>Email:</td>
            <td><input type="text" name="email" /></td>
          </tr>
          <tr>
            <td>Phone:</td>
            <td><input type="text" name="phone" /></td>
          </tr>
          <tr>
            <td></td>
            <td><input type="submit" value="Register" /></td>
          </tr>
        </table>
      </form>
    </div>
  </td>
</tr>
</div>
```

Summary

- OOP is a design philosophy.
- OOP is a programming paradigm.
- OOP systems can be easily upgraded from small to large scale
- It reduces software maintenance and developing costs.
- OOP should help in developing high quality software easily.
- Key terms in OOP: object, class, method, message...

E-Learning Heroes

Save the day with powerful e-learning.

Hello, I'm Tom Kuhlmann from Articulate. Welcome to our high-powered community where you'll find me, David, Jeanette and 107,816 e-learning professionals. We've got:

- ☐ Step-by-step tutorials for building better courses
- ☐ Fast answers to your e-learning questions
- ☐ Advice and opinions from industry experts
- ☐ Free downloads for your projects
